Sysma Wave

Reshape your body with shock waves!

NO MORE CELLULITE

ELIMINATES EXCESS FAT

RELAX THE MUSCLES

ELIMINATES THE

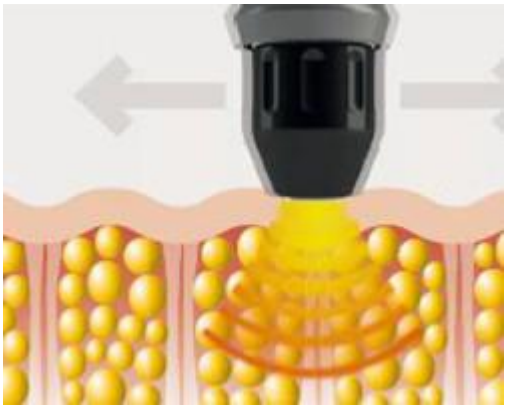
“ORANGE PEEL SKIN” EFFECT

Finally a real solution at the problem!

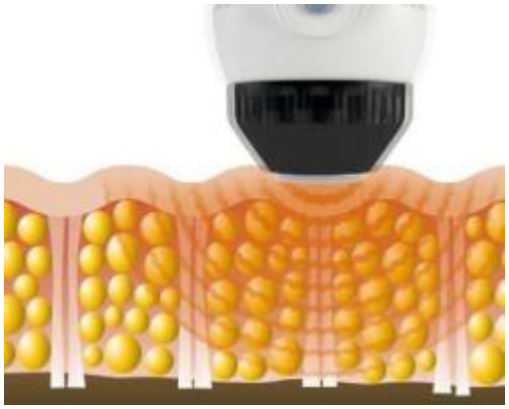
The therapy with shock waves (also known as acoustic waves), was initially used in the urological field for the treatment of kidney stones; by the time, thanks to the science researches, has found new fields of application. Sysma wave is the device that helps eliminates all the skin's problem like the cellulite and so on.

Focused acoustic waves

Radial acoustic waves

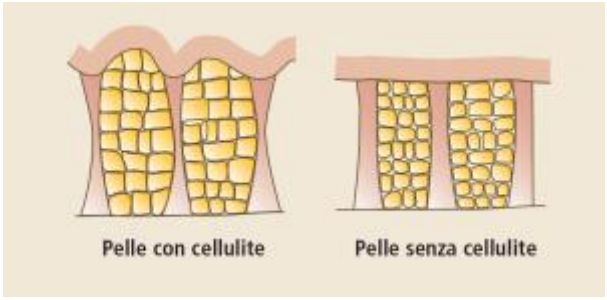


Vibratory Waves.



Regenerative waves

Reshape your body with Sysma wave, the results are guarantee!



SYSMA WAVE generate high energy acoustic waves unique and innovative, using a 5 heavier bullet compared to the standard systems made by compressed air, and a reduced speed of impact with the applicator.

BEFORE the treatment

The enlarged fat cells push over the skin surface. The vertical inelastic fiber of the connective tissue does not stretch out within the fat cells. That confers to the skin the classical aspects of “orange peel skin”. The local microcirculation is significantly reduced.

DURING the treatment

Acoustic waves are introduced in the body. The connective tissue relaxe itself while the tone of the epidermis increase. The vascularization of the tissue is strongly stimulated and the fat cells are reduced of volume.

AFTER the treatment

Skin and connective tissue become more toned and compacted and retrieve their natural laxity, with an improvement of the skin surface stable over time.
