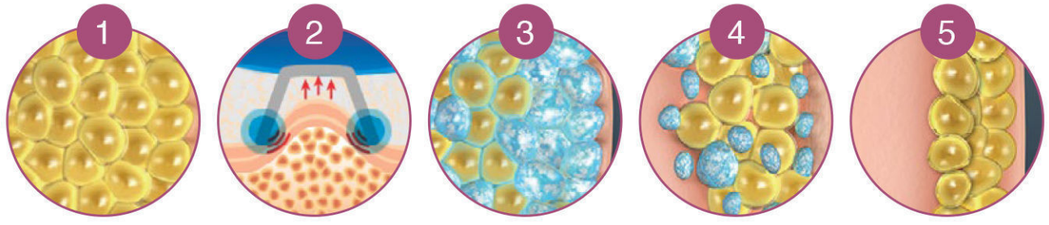
Working priciple

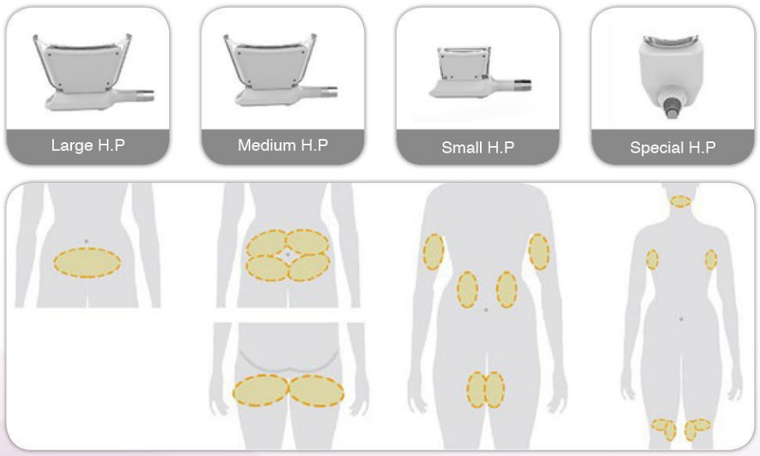
As triglyceride in fats will be converted into solid in particular low temperature, this machine uses precisely controlled cooling energy to the target areas for treatment. It selectively targets at certain fat bulges and eliminate fat cells through a gradual process that does not harm the surrounding tissues and reduce unwanted fat,
When fat cells are exposed to precisely control cooling, the triglyceride in fats will be converted into solid, and they will be Crystallization, aging, and then die. The dead fat cells will be out of body by natural metabolism.

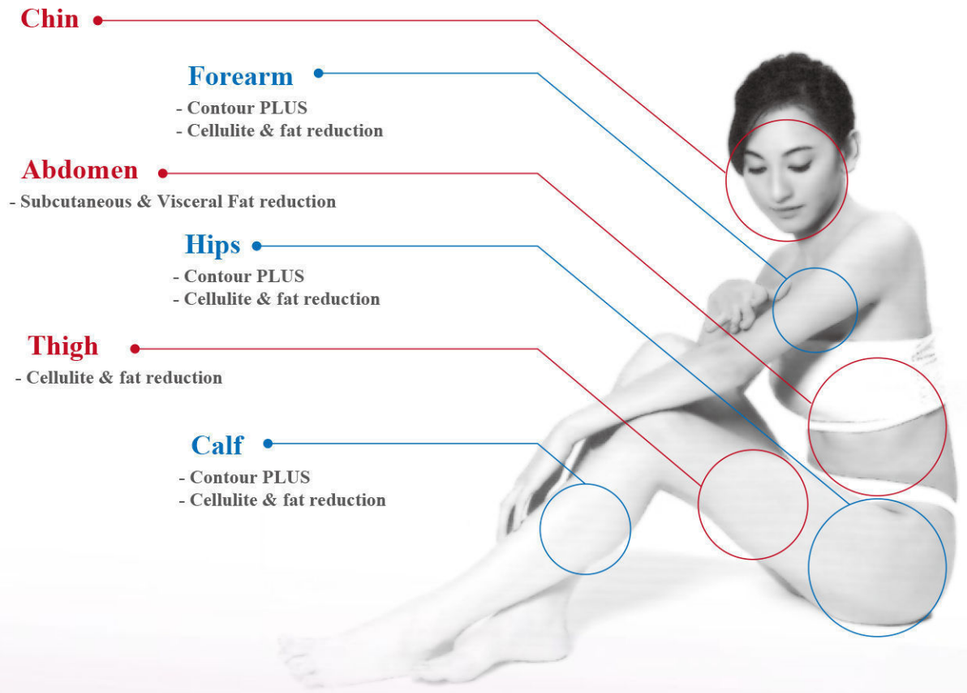
Treatment Process



01 | Treatment area prior to applying cooling
02 | Precisely controlled cooling is applied to the treatment area
03 | Underlying fat cells are targeted.
04 | Fat cells begin a natural removal process that continues for several months
05 | The natural removal of fat cells over time results in gradual fat reduction

Dynamic handpiece





- Four different sizes handpieces optional,easy treatment for whole body.
- Four handpieces working simultaneously, save staff cost, save treatment time.
- Unique double chin treatment handpiece, lead the latest technology in the world.
- Super strong cooling system ensure the minimun treatment temperature reduce to -15 → 5℃
- Non-surgery, no risk, easily intelligentize and humanization operation
- No need recovery, no downtime, come back to work immediately.
- Variety accessories for multi-functional treatment
- Luxury design
- Easy operation for all program
