EBS SONATA

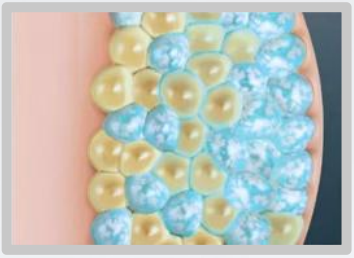
Cryo+RF+ Cavition

Cryo Handle

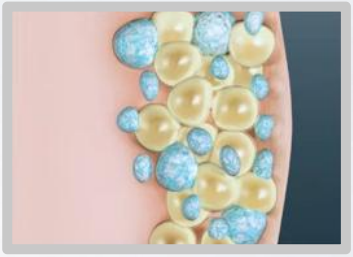
After the adipose tissue of the target care site is sucked into the cooling probe, the cooling probe releases a 360-degree surrounding cooling energy to act on the fat cells without damaging any surrounding tissue. Cryocool's steady and powerful cooling energy triggers a natural cell death process called "apoptosis", after which apoptotic fat cells are excreted through the body's natural metabolic process. Cryocool targets fat cells for permanent removal from the body, resulting in significant fat loss in the treated area.

1 Many of us have stubborn fat despite diet and exercise.

2 Warm-up technology to accelerate blood circulation



3 Applicator 360 degrees around fat cells without damaging any surrounding tissue



4 In the weeks to follow, your body naturally process the fat and eliminates these dead cells.

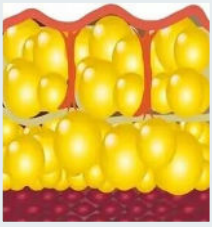
5 Cryocool procedure results are long-term, as treated fat cells are gone for good.

Cavitation handle

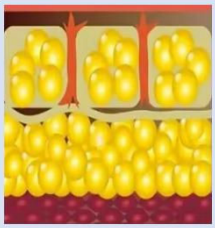
Ultrasonic Cavitation also known as Ultrasound Liposuction and Ultra Cavitation is a non-surgical fat removal procedure that uses scientifically proven non-invasive technology to break down

ultrasonic fat explosion can effectively consume calories, cell moisture, reduce fat cells, so as to achieve the effect of removing fat

Burst fat

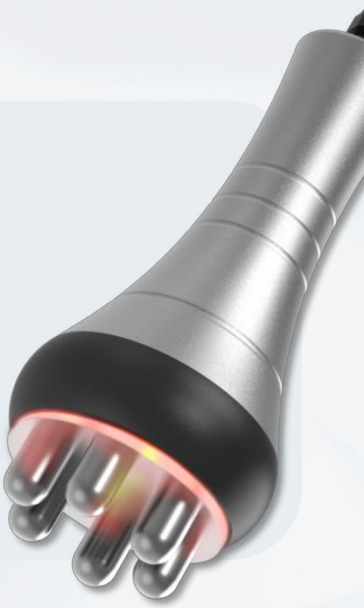


Split

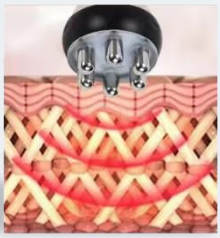


Reshape

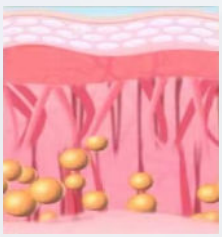
RF Handle



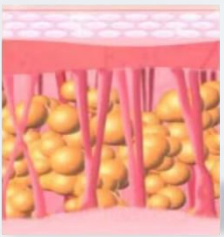
6 polar RF head for body Fat dissolved, lymphatic drainage, firm skin,enhance skin elasticity,
can direct the fat layer having a directional RF output function of fat cells to accelerate the movement of heat through sweat gland, enterohepatic circulation and lymph circulation to the body of excess fat and toxins from in vitro, so as to dissolve fat.



Heating



Wake up



Promote

3 pole face radio head acts on the skin, can dermal collagen fibers is heated to 45 degrees to 65 degrees, collagen fibers victoria shrink immediately, so that the loose skin wrinkles are stretched, while stimulated proliferation of dermal collagen, prompting dermal thickness and density increase, so as to achieve the removal of wrinkles, slashing scars, restore skin elasticity and gloss to achieve firming, wrinkle purpose.

Plan A

Cryo+RF +Cavition
Fat loss + slimming + firming

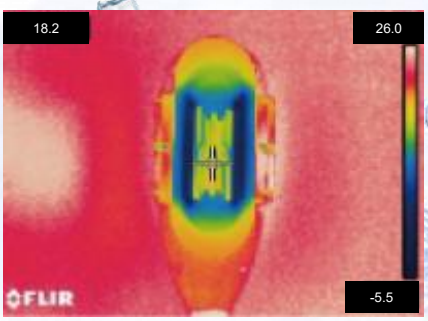
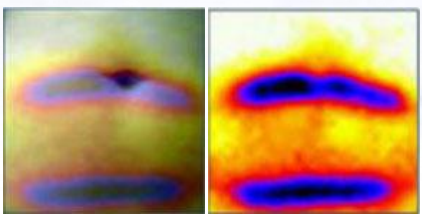
before after

360° cooling

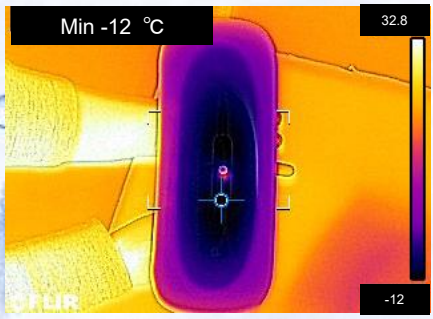
Cooling on both sides

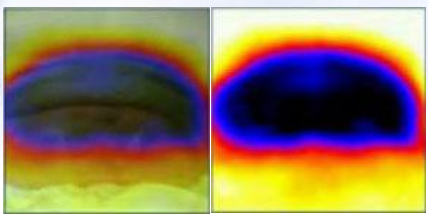




Traditional Cryolipolysis by two Chilling Plates, Only 40% effective for treatment area

360°refrigeration



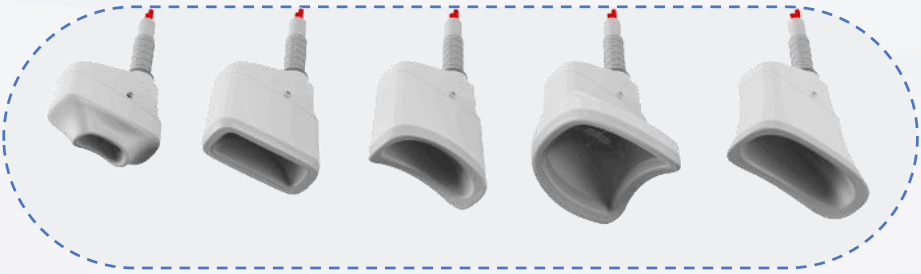


NEW 360° cooling applicator. 100% effective for treatment area The lowest temperature can reach -12 degrees

Medical filter cotton, effectively filter debris

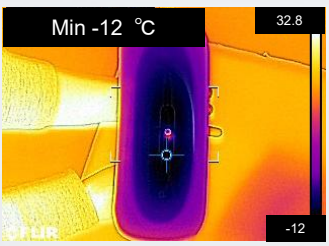
Medical silicone, safe and comfortable

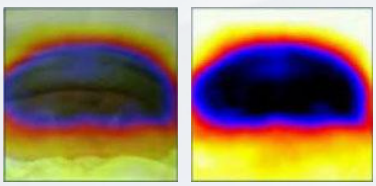
Cryo treatment fast, efficient and comfortable



NEW 360° cooling applicator

The maximum effective treatment area is 402.80cm²





NEW 360° cooling applicator. 100% effective for treatment area The lowest temperature can reach -12 degrees

100% effective for treatment area

The lowest temperature can reach -12 degrees

Humanized design, considerate service

Small screen on the handle for real-time monitoring and adjustment

Can treat any part of the body, comfortable and convenient

Humanized design, considerate service

Specification

The treatment head can be plugged in and out

Treatment Head **P1**

Treatment Head **P2**

Treatment Head **P3**

Treatment Head **P4**

Treatment Head **P5**

Specification

Input power： 1700W

Frozen Head Pressure： 0-60Kpa

Frozen Head Screen： -12°C -1°C

Cavition: 40K

RF frequency: 2M

Treatment Handle's Type： 5 Optional (replace applicator)

Machine Screen： 15.6 inch Collapse screen
30°-73° adjustable.
Handle screen: 3.5inch

Cooling System： Semiconductor cooling
+ water cooling +air cooling

Dimension： 40*53*110CM
